

Aon Benfield Analytics

ExposureView™

ExposureView 3.2 is the next iteration of Aon Benfield's award-winning analytics and risk mapping platform that allows clients to visualize and quantify their exposures to risk. With this highly versatile technology, clients can perform claims planning and preparedness, post-catastrophe analysis, pre-binding underwriting analysis, analyze ad-hoc accumulations, map individual risks for any geographic location, identify risks around terrorist targets, and a host of other functions.

The ExposureView 3.2 Advantage

- **Load new data on demand.** Clients are able to upload a new exposure or claims dataset at any time to analyze current information when managing a catastrophe or monitoring portfolio growth.
- **Integrate ExposureView directly into your underwriting system.** The latest version is available via an API (Application Programming Interface), which enables clients to stream ExposureView data and reports directly into software applications.
- **Pivot table reporting capabilities.** Designed with a user-friendly interface, ExposureCube adds a new dimension to business intelligence by combining spatial querying with tabular reporting. Dynamically interact with data to build and deliver reports instantaneously.

Web-based, fast deployment, zero administration, unlimited scalability, and no software install.
